# What is League of Legends anyway?

- An **online computer game** (MOBA)
- Two teams of five compete to **destroy the enemy base** (Nexus)
- The **towers and mini-bases** (inhibitors) have to be destroyed first
- Each team has minions that help them **destroy structures**.
- The jungle has **neutral monsters** that **grant bonuses** upon their death

# What bonuses are we talkin'?

**Red Buff:** Increased health regeneration and bonus damage

**Blue Buff:** Increased mana regeneration and cooldown reduction

**Dragon:** Increased damage/structure/movement speed/regenerations (element based)

**Baron:** Increased **everything**, plus minion damage increase

# So what's your main question?

- Slaying the neutral monsters is optional for winning
- Is trying to slay them worth the potential risks?
- Does taking neutral monsters for your team increase odds of victory?
- Let's find out!

Description

League of Legends competitive matches between 2015-2017. The matches include the NALCS, EULCS, LCK, LMS, and CBLol leagues as well as the World Championship and Mid-Season Invitational tournaments.

Released Under CC0: Public Domain

I used data from the League of Legends World Championships from 2015-2017 (3802 games)

All professional players making the “best” decisions at “peak” performance.

# My Conclusion

- Baron **slightly boosts chances** of victory, but it's **not worth the risks** involved
- It is important to note that several things affect victory:
- Obviously, correlation doesn't imply causation, but SKT both has highest win rate AND highest BaronScore, however, there are most likely lurking and confounding variables: gold, kills, towers, mood, attitude, communication; so it's hard to tell if Baron truly is the cause for victories
- It would be nice if there was a Pro\_Teams table that included the team statistics all together; I had to piece together the data myself
